Hi OpenSea Team!   🙂

My name is Danya, I'm a UI developer from Ukraine. Currently, I leave in Krakow and work remotely for Readdle company.

How may I be of use?
I have experience in various directions like designing and building Front-end apps. Contrariwise, I keep my focus on the development part. My knowledge of design helps me in understanding the patterns and dependencies in the mockups and developing the best UI components.

Why OpenSea?
The team, the product, and the values.

1. **The Team.**
   I know for sure, that you have a cool team that creates the incredible product and enjoys what it's doing.

2. **The Product.**
   You build an awesome product, which I use and admire. I've created my "Circus Escape" collection via OpenSea, and I'm pretty sure that the biggest results are made when the team members use what they create.

3. **The Values.**
   I've heard some cool stories from your employees about your well-tuned processes, great attitude towards employees, and the company's mission. Your mission is to build an open digital economy. **This mission inspires me a lot.**

P.S. I'll be super glad to have a talk with you and show my skills via the test task.

Thank you!
